© 2014 Pearson Education, Inc. Concept 34.4: Blood components function in exchange, transport, and defense With open circulation, the fluid that is pumped comes into direct contact with all cells and has the same composition as interstitial fluid The closed circulatory systems of vertebrates contain blood, which can be much more highly specialized

Biology in Focus - Chapter 34

The heart is the key organ for blood circulation and the double circulation is an efficient way of circulation as it provides an effective way of circulation. The main difference is that the blood follows two routes - one for oxygenated blood and the other for deoxygenated blood. Hence the name "double circulation."
