MDR conveyors: Motorized roller conveyors, frequently called motor-driven roller (MDR) systems, are built in sections where a single cylinder from each segment is propelled by it's own drive mechanism. That one powered roller is linked to the adjacent rollers in that section via flexible O-rings, thereby rotates all the cylinders in the segment.

frame that supports either rollers, wheels, or a belt, upon which materials move from one place to another. They may be powered by a motor, by gravity, or manually.

## **Understanding Conveyor Systems - Types, Applications and ...**

This new Conveyor System is designed so that the frame structure, actuators, rollers, belts, controls, and all other elements are aligned and self-contained. Traditionally roller conveyor manufacturers build using drive heads, sprockets, couplings and even motors that are attached to or inside the rollers, creating exposed hazards and a non-contemporary look.
