This chapter defines its own set of data types representing class file data: The types u1, u2, and u4 represent an unsigned one-, two-, or four-byte quantity, respectively. In the Java SE platform, these types may be read by methods such as readUnsignedByte , readUnsignedShort , and readInt of the interface java.io.DataInput .

### **Chapter 4. The class File Format - Oracle**

This chapter describes the class file format of the Java Virtual Machine. Each class file contains the definition of a single class, interface, or module. Although a class, interface, or module need not have an external representation literally contained in a file (for instance, because the class is generated by a class loader), we will colloquially refer to any valid representation of a class ...
