Some electronic components such diodes and transistors do not obey Ohm's law and have a non-linear current-voltage relationship. The power dissipated by a given circuit component is the product of voltage and current, $P=VI$. The unit of power is the Joule per second (J/s), which is also known as a Watt (W).

Frequently Asked Questions - Electronic Products

The new product development process for an electronic product (or any product) is by no means simple. It's a pretty overwhelming task especially for those with limited resources such as entrepreneurs, makers, start-ups and small companies. However, the process can be simplified by breaking it down into five steps.
