The site itself is available in English, German, French, Italian, and Portuguese, and the catalog includes books in all languages. There's a heavy bias towards English-language works and translations, but the same is true of all the ebook download sites we've looked at here.

Emacs Calc Manual

The Calc manual can be printed, but because the manual is so large, you should only make a printed copy if you really need it. To print the manual, you will need the TeX typesetting program (this is a free program by Donald Knuth at Stanford University) as well as the texindex program and texinfo.tex file, both of which can be obtained from the FSF as part of the texinfo package.

Calc manual - GNU Project - Free Software Foundation (FSF)

The documentation for Calc (this manual) comes in a file called ``calc.texinfo'`. To format this for use as an on-line manual, type ``make info'` (to use the `makeinfo` program), or ``make texinfo'` (to use the `texinfo.el` program which runs inside of Emacs). The former command is recommended if it works on your system; it is faster and produces nicer-looking output.

GNU Emacs Calc 2.02 Manual: Installation

Calc's stack can grow as large as you like, so it uses numbers instead of letters. Some stack-manipulation commands accept a numeric argument that says which stack level to work on.

Normal commands like `+` always work on the top few levels of the stack. The Stack buffer is just an Emacs buffer, and you can move around in it using the regular ...

RPN Tutorial - GNU Emacs Calc Manual

3.5.2 Formula syntax for Calc. A formula can be any algebraic expression understood by the Emacs Calc package. Note that Calc has the non-standard convention that '/' has lower precedence than '*', so that 'a/b*c' is interpreted as '(a/(b*c))'. Before evaluation by calc-eval (see (calc)Calling Calc from Your Lisp Programs), variable substitution takes place according to the ...

Formula syntax for Calc (The Org Manual) - Org mode for Emacs

It's Emacs, right? Right. Fun with Emacs Calc. Emacs is equipped with a really, really awesome and spiffy RPN calculator (HP calculator fans, rejoice) capable of manifold things like algebraic and symbolic manipulation; matrix manipulation; conversion routines and much, much more.

Fun with Emacs Calc - Mastering Emacs

Calc is a calculator with many advanced features, once described as the poor man's Mathematica. It has been part of GNU Emacs since version 22. As a simple calculator. If all you need is a simple calculation and don't want to deal with RPN mode, you can use Calc in algebraic mode. To do so, just run Calc with M-x calc <RETURN>, and then hit apostrophe (') - now you can type in your formula normally and hit enter for the result.

EmacsWiki: Calc

While it helps to have some experience with GNU Emacs in order to get the most out of Calc, this manual ought to be readable even if you don't know or use Emacs regularly. The manual is divided into three major parts: the "Getting Started" chapter you are reading now, the Calc tutorial (chapter 2), and the Calc

removing the top one or two values from the stack, performing the desired operation, and pushing the result back onto the stack.

GNU Emacs Calc 2.02 Manual: Arithmetic

There are several ways to "program" the Emacs Calculator, depending on the nature of the problem you need to solve. Keyboard macros allow you to record a sequence of keystrokes and play them back at a later time. This is just the standard Emacs keyboard macro mechanism, dressed up with a few more features such as loops and conditionals.
