Magnet Generator

Permanent-magnet generators are simple in that they require no system for the provision of field current. They are highly reliable. They do not, however, contain any means for controlling the output voltage.

ST Series generators are “rotating field” types. In this type of generator, the output power comes from windings are held fixed in position on the motor frame (the stator) while an electrically-generated magnetic field is rotated past the stator windings by turning the rotating assembly (the rotor).

User's Manual AMG Synchronous Generator

In a permanent magnet generator, the magnetic field of the rotor is produced by permanent magnets.

Other types of generator use electromagnets to produce a magnetic field in a rotor winding.

The direct current in the rotor field winding
