### Piping And Pipeline Engineering

Pipelines are most economical ways of transporting liquid, gases and solids over long distances. Although they require large initial investment, over their operating life they more than compensate for the capital investment. Pipeline Engineering is a specialized field. Following articles attempts to provide a sneak peak into this field.

Both Piping and Pipeline are originated from Mechanical Engineering and many a time, share common activities. For example, both have piping materials, piping expansion, stress, and support problems. So, both piping and pipelines need Stress and Material engineers. Both piping and pipelines are used to transport fluids.
