The Future Of Bioethics

The Future of Bioethics: It Shouldn't Take a Pandemic. Abstract: The Covid-19 pandemic has concentrated bioethics attention on the "lifeboat ethics" of rationing and fair allocation of scarce medical resources, such as testing, intensive care unit beds, and ventilators. This focus drives ethics resources away from persistent and systemic problems—in particular, the structural injustices that give rise to health disparities affecting disadvantaged communities of color.

The Future of Bioethics may well turn out to be one such book as far as bioethics is concerned. Bioethics as a discipline was born in the 1960s and 1970s and has since then matured and established as a field of enquiry traditionally associated with medical care at the beginning and end of life as well as research on human subjects.

The thesis of Laurie Johnston's thought-provoking essay seems to be that the future of bio- and health care ethics should move away from a 'dilemma-centered' approach and focus instead on a more constructive project — and in particular, one which shows that the flourishing of human beings and ethical behavior, instead of being mutually exclusive, actually build on each other.

The Future of Bioethics: A New Professor's Reflection

ABSTRACT In this paper I argue that bioethics is in crisis and that it will not have a future unless it begins to embrace a more Socratic approach to its leading assumptions. The absence of a critical and sceptical spirit has resulted in little more than a dominant ideology. I focus on three key issues.

A future bioethics shaped by new thinking about humans based in biology and computer science might find bioethicists superfluous. The intelligent algorithm will make choices that we follow. Ironically, this future looks a lot like the past, where an external deity determines right and wrong and we follow.
